100	Mi EXXX por Wisin & Anuel Aa	THE ORCHARD MUSIC	668	2.515

METODOLOGIA DE CALCULO PORCENTAJE DE MUSICA NACIONAL

Fuente de la información.

La Información del porcentaje de música nacional en radios se obtiene de los resultados del software VERICAST, de la empresa española BMAT, utilizado desde fines del año 2011 por SCD.

Actualmente el sistema opera reconociendo en línea la música ejecutada en 300 radios de todo el país, a través de sus señales online, lo que constituye la muestra en estudio.

Dicho software, utilizado ampliamente por muchas sociedades autorales y usuarios en todo el mundo, reconoce la música ejecutada, cargada en su base de datos que están en constante actualización, a la que se cargan periódicamente las últimas obras nacionales. Esta tarea está a cargo de un técnico de SCD.

Para evitar desfases de información, el software permite cargar una grabación de un tema musical, y reconocerla retroactivamente hasta 6 meses antes de la fecha actual.

El sistema ha operado sin inconvenientes, y luego de una curva de crecimiento de la taza de reconocimiento, producto de la carga inicial de obras y de la carga periódica, actualmente opera con tazas de reconocimiento de más de 97%.

Método de cálculo.

La metodología de cálculo del porcentaje de música nacional en cada radio es la siguiente:

Los artistas nacionales se han ingresado y marcado en el sistema Vericast con un marcador especial. De esta forma los artistas nacionales son diferenciados de los extranjeros al ser asignados a un reporte denominado "Catálogo nacional"

Para un periodo dado, se determina el número de obras nacionales ejecutadas en la radioemisora analizada, y el número de obras extrajeras ejecutadas. En el caso de obras no identificadas, VERICAST las reconoce como "Unknown" y, en un mínimo porcentaje, estás quedan fuera de la base de cálculo.

Para los efectos de este informe, en los rankings se aplica un filtro de 60 segundos en el sistema Vericast, es decir aquellas canciones que salen al aire un tiempo mínimo de 60 segundos quedan fuera de este monitoreo. Lo anterior es debido a que existen muchos temas correspondientes a publicidades o características de programas de radio que tienen duraciones de solo segundos al aire estos tienen una alta rotación y distorsionan el muestreo.

El porcentaje de música nacional de cada radioemisora, será dado por el resultado de dividir el número de obras nacionales ejecutadas en el periodo, por el número total de obras nacionales como extrajeras ejecutadas en el período, expresado como porcentaje.

A partir de la información anterior, el porcentaje de música nacional a nivel regional o nacional estará constituido por el promedio de los porcentajes de cada radioemisora considerada.

En el caso del cálculo en regiones extensas o a nivel nacional, cada una de las radioemisoras que cuenten con estaciones repetidoras en el territorio considerado, será ponderada por el número de emisoras totales con que cuenta en ese territorio. Para ello, el total de repetidoras de cada radio se obtiene de la información que tienen disponibles las propias radios en sus páginas web y también fuentes de información alternativas.
